Specialists in Plastics Recycling & Plastic Sheet Extrusion Products

ROOT BARRIER PRODUCT

The Resitech "DRY-ROOT" Root Barrier product is made from a flexible High Density Polyethylene membrane that has been specially designed to restrict the unwanted migration and spreading of plant roots that can cause costly damage to pavements, roads, building foundations and buried installations and streetscapes.

"DRY-ROOT" root barrier can save the property owner thousands of dollars annually in the expensive repair bills from damage caused through tree root damage. Keeping the roots out and moisture in offers a far greater cost efficiency than expensive and inferior methods such as concrete, fibre cement sheeting and metal.

Application:

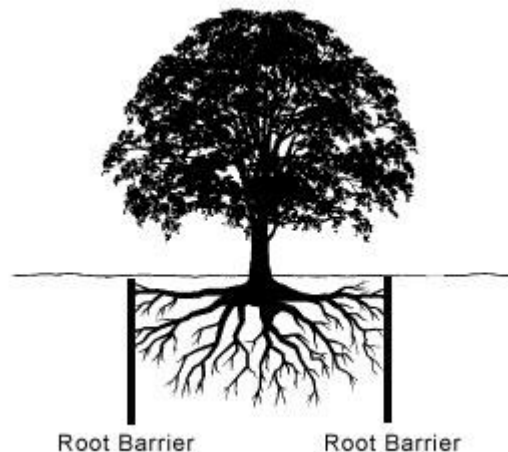

Root Barrier is available in 300mm, 600mm, 900mm and 1200mm widths x 1000um thickness as a standard size, as well as custom extrusion sizes, thicknesses and lengths for specific applications. The Root Barrier is lightweight, flexible yet extremely durable and resistant to UV, chemicals and fungus.

Benefits:

- ✚ Lightweight and easy to install with a narrow width excavator,
- ✚ Provides a barrier against shallow roots, reducing uplifting of sidewalks etc,
- ✚ Redirects roots downwards to encourage deep rooting to anchor trees and to avoid root circling,
- ✚ Embossed product profile for extra friction generated by affected roots,
- ✚ Cost effective compared to concrete.
- ✚ UV stabilised HDPE ensures long-term protection.
